

Help athletes achieve their peak performance with SilvaClean®

Until now, hygiene efforts in athletics have focused largely on the obvious sources of contamination i.e. hard surfaces. But studies have proven that fabrics are capable of harboring odor- and stain-causing bacteria, mold and mildew.

SilvaClean technology is now a breakthrough key preventive strategy in the sports sector to help reduce microbial growth on athletic gear. SilvaClean is a patented, EPA-approved, and eco-friendly technology that uses silver ions, a natural antimicrobial, to eliminate and protect against odor- and stain-causing bacteria, mold and mildew on fabrics. Materials ranging from towels to uniforms are treated with SilvaClean each time they are laundered, ensuring lasting protection and the cleanest possible environment.

The problem

- Studies show that fabrics harbor stain- and odor- causing bacteria, mold and mildew for months – prior to, during and after they are used
- Stain- and odor- causing bacteria are increasingly common among professional and student athletes in sports such as football, wrestling, soccer, basketball, lacrosse, martial arts, and baseball

The SilvaClean solution

- Proven in peer-reviewed studies to be effective and long-lasting
- Integrates seamlessly into the current laundry process – no need for process changes or additional staff training
- Works on all existing textiles/inventory
- Ensures athlete comfort and confidence
